

Services are divided into two categories, called Primary Services and Secondary Services. Members have to apply for each primary service they wish to use.

Each primary service has its own set of rules and requirements. The requirements for the service can be found on the page that describes the service.

The common requirements can be viewed on the **joining requirements** page.

Secondary Services are services that are available to customers of one or more Primary Service, but that are not as such tied to any Primary Service. Some of them may require participation in certain Primary Services though.

Fees

Some services are covered by the monthly membership fee. The basic membership fee also covers two (2) switch ports. Both ports can be One or Ten Gigabit Ethernet. **Service fees** are listed on a separate page.
