Services are divided into two categories, called Primary Services and Secondary Services. Members have to apply for each primary service they wish to use.

Each primary service has its own set of rules and requirements. The requirements for the service can be found on the page that describes the service.

The common requirements can be viewed on the **connecting requirements** page.

Primary Services include:

- **Tampere Peering**
- **Turku Peering**
- **Private Service VLAN** also known as Closed User Groups

Secondary Services are services that are available to customers of one or more Primary Service, but that are not as such tied to any Primary Service. We also host some Public Services that behave like Secondary Services. Some of these services require participation in certain Primary Services such as Unicast Peering.

Secondary and Public Services include:

- **Mailing Lists**
- **Route Servers**
- **AS112 Project** and other anycast services
- **Teredo Server**
- **DNSSEC Recursors**
- **DNS64 Recursors**

Services

- **irc.cc.tut.fi**
- **Debian GNU/Linux Mirror**[1]
